

Robotic Vision Summer School

Australian Centre for Robotic Vision

The ability to see is the remaining technological roadblock to the ubiquitous deployment of robots into society. The Robotic Vision Summer School (RVSS) provides a premium venue for graduate students and industry researchers to learn about fundamental and advanced topics in computer vision and robotics. The school offers a tremendous opportunity to broaden educational experience and professional networks for attendees. The program is targeted at the level of later-year Masters and fresh PhD students in the Australian system. The school attracts a wide cross section of students from across Australia and around the world and particularly those that are working at the intersection of robotics and vision.

The summer school is seeking sponsorship to establish a permanent financial basis for the school. The school is organised and sponsored by the Australian Centre for Robotic Vision. All sponsorship funds provided will be retained by the school and contribute to the running costs and provide and expand scholarship programs for international students to attend the school.

Sponsorship levels:

Bronze:

Contribution: One person to register.

Services Provided

- Handouts.

- Logo on the sponsorship page (not the home page)
- 5 min presentation as part of the attendee slots.
